

Cercidiphyllum japonicum **'Pendulum'**

Высота	6 - 8 м
Ширина	4-6м
Крона	broad, weeping, half-open crown
Кора и ветви	grey, smooth at first, peeling in strips later
Лист	ovate to nearly round, 5 - 10 cm, (blue-)green
Осенний окрас	желтый, оранжевый
Цветы	inconspicuous, reddish, April, fragrant flowers
Плоды	inconspicuous follicle (on female trees)
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	loose, preferably loamy, not too dry, cannot tolerate drought
Мощение	устойчив к частичному мощению
Зона зимостойкости	5 (-28,8 до -23,4 °C)
Устойчивость к ветру	moderate to good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	кашпо для деревьев, сады на крыше, небольшие сады, сады в патио
Форма	штамбовое дерево
Происхождение	Japan, circa 17th century
Синонимы	<i>Cercidiphyllum magnificum</i> f. <i>pendulum</i>

Relatively fast growing, small to medium size tree with very pendulous branches, creating a broad, weeping shape. Can eventually grow 8 m tall and at least as broad. The bark is grey, peeling in strips when mature. The almost round leaf is light bronze-green on emerging, turning (blue-)green in summer. The autumn colour is brownish yellow to orange-yellow. As typical for the species, the falling leaf has a pleasantly spicy/cinnamon scent. Was already being cultivated in the 17th century at a Buddhist temple on the Japanese island of Honshu. Thrives in loose, preferably loamy soil. Poor tolerance to drought. The spring leaf is sensitive to night frosts. Primarily for use as a solitary tree in a large garden or park.
