

Cercis canadensis

Высота	6 - 8 (12) m
Ширина	6-8m
Крона	round to flat globular, half-open crown
Кора и ветви	grey, later shallowly grooved
Лист	wide heart-shaped, bright green, 8 - 14 cm
Цветы	light pink to pale red, in clusters, April/May, fragrant flowers
Плоды	brown, flat pods, to 8 cm long
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	calcareous sand or loam soils, not too wet
Мощение	неустойчив к мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, привлекает бабочек
Применение	небольшие сады
Форма	штамбовое дерево, многоствольное дерево
Происхождение	eastern and central North America

From a wide, spreading shrub *C. canadensis* grows into a nice, often multiple-stemmed solitary tree of average height. The bark is grey and shallowly grooved, when mature the bark can flake in small plates. The leaf is wide heart-shaped with a pointed or acuminate tip. The flowers appear before the leaf in compact clusters on the old twigs, branches and trunk. The flat pods persist all winter. It is a deep rooting tree with a coarse root system. Thrives best in a sheltered, sunny and fertile locations and is very hardy. The nice cultivar 'Forest Pansy' has a dark purple-red leaf.
