

Clerodendrum trichotomum

Высота	circa 6 m
Ширина	4-6m
Крона	round, half-open crown
Кора и ветви	light grey
Лист	ovoid to heart-shaped, green, 8 - 15 cm
Цветы	white, with dark red calyx, bunches, August/September, fragrant flowers
Плоды	blue, borne red calyx
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	few requirements, tolerates sandy soil
Мощение	устойчив к частичному мощению
Зона зимостойкости	7a (-17,7 до -15,0 °C)
Устойчивость к ветру	moderate
Дерево-среда обитания для животных	притягивает бабочек
Применение	кашпо для деревьев, небольшие сады, сады в патио
Форма	штамбовое дерево, многоствольное дерево
Происхождение	East China, Japan

A multiple-stemmed shrub by nature, sometimes cultivated as a tree. The leaf has a pointed tip and smells strongly of peanut butter when rubbed. The flower bunches are loose and open and consist of small, circa 1.5 cm large, white flowers that have a pleasant fragrance and a strikingly dark red calyx. They can become circa 20 cm across. Just as nice are the circa 1 cm, beautifully deep blue berries, borne on a persisting dark red calyx. The plant has fleshy roots and can be propagated by root cutting. Its location has to be sunny and warm. In cold winters the young twigs may be damaged. The variety fargesii is different because the calyx are green instead of red. The fruits are usually slightly lighter blue.
