

Crataegus laevigata

| | |
|------------------------------------|--|
| Высота | 5-6 m |
| Ширина | 4-5m |
| Крона | round/spherical, half-open crown, capricious growing |
| Кора и ветви | flaking, brown, grey |
| Лист | green |
| Цветы | white, flowers in May, fragrant flowers |
| Плоды | red |
| Колючки/шипы | Yes |
| Ядовитость | неядовитый, обычно |
| Вид почвы | loamy soil, sandy soil |
| Мощение | неустойчив к мощению |
| Зона зимостойкости | 5a (-28,8 до -26,1 °C) |
| Устойчивость к ветру | bad |
| Прочие виды устойчивости | устойчив к морозам, зона 1 - 6 |
| Дерево-среда обитания для животных | устойчив к морозам, зона 1 - 6, дерево-источник питания для птиц |
| Применение | аллеи и широкие улицы, небольшие сады |
| Форма | штамбовое дерево, многоствольное дерево |

Crataegus laevigata is native to most of Europe. It forms a thorny bush that grows into a tree with a more or less rounded crown. Height 5 - 6 m. The branches bear thorns approx. 2.5 cm long. The wide ovoid leaves measure 2 - 6 cm, have three lobes and emerge in early spring. They start off a fresh colour of green but later turn darker. Produces abundant flowers in May/June. They grow in umbels, have two styles and are pleasantly scented. In the autumn pear-shaped fruits appear, measuring approx. 1 cm. For soils that are not too moist and are nutritious. Winter hardiness zone: 5a
