

## Diospyros kaki

Высота	6 - 10 m
Ширина	4-8m
Крона	broad ovoid to round or fan-shaped, dark, dense crown, capricious growing
Кора и ветви	brown-grey, grooved
Лист	oval to elliptical, glossy dark green, 6 - 18 cm
Цветы	bell-shaped, pale yellow, unisexual, about 1.5 cm, June
Плоды	berry-shaped, orange, 3 - 7 cm, edible, edible fruits
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	fertile, well-drained loamy soil
Мощение	устойчив к частичному мощению
Зона зимостойкости	8b (-9,4,5 до -6,7 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	сустойчив к ветру
Дерево-среда обитания для животных	сустойчив к ветру, дерево-источник питания для птиц
Применение	небольшие сады, сады в патио
Форма	штамбовое дерево, многоствольное дерево, полуштамбовое фруктовое дерево
Происхождение	China, Japan

Medium-size tree with an almost round to fan-shaped crown. The older bark is brownish grey and deeply grooved. The leaves are glossy dark green and can grow to over 15 cm, depending on the position and (micro)climate. Sometimes produces rather brownish yellow autumn colours, but these are hardly decorative. Because of their colour and the fact they are hidden between the leaves, the pale yellow, bell-shaped flowers are not very conspicuous. Female flowers produce large, edible berries called kaki or sharon fruit. These are orange and have four conspicuously triangular sepals on top. The fruits taste rather insipid and can be eaten on their own or in dishes. Thrives in fertile, well-drained soil, preferably loamy. Tolerates wind well, except cold, dry wind.
