

Fagus sylvatica 'Aspleniifolia'

Высота	10 - 15 m
Ширина	10-15m
Крона	round, dark, dense crown
Кора и ветви	smooth, grey bark, soft
Лист	oval, deeply lobed to deeply dissected, dark green, about 10 cm long
Осенний окрас	желтый
Цветы	small, inconspicuous flower catkins, May
Плоды	nuts, in cupules covered with brushy spines, 1 - 2 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	well drained, humic soil, not too wet
Мощение	неустойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	аллеи и широкие улицы
Форма	штамбовое дерево, разветвленное дерево, многоствольное дерево
Происхождение	France, circa 1804

A cultivar that draws the attention because of its decorative, deeply dissected leaf. It attains a height of 10 - 15 m. When maturing it gets a dense, spreading crown. The smooth bark is grey. The dark-green leaves are irregularly deeply dissected to lobed. Some leaves are very narrow and have a few small side-lobes, they become \pm 10 cm long and \pm 5 cm wide. The autumn colour is warm golden yellow and the inflorescence is inconspicuous. In autumn the 1 - 2 cm long nuts follow, it bears profusely only at a later age. 'Asplenifolia' is a solitary and prefers not too wet soil, well-drained and high in humus content. Moderately wind resistant. Winter hardiness zone: 5b
