

## Fagus sylvatica 'Swat Magret'

Высота	20-25 m
Ширина	15-20m
Крона	round/spherical, half-open crown
Кора и ветви	grey
Лист	reddisch brown
Цветы	yellowgreen, flowers in May
Плоды	brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	loamy soil, sandy soil, peaty soil, calcareous soil
Мощение	неустойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	аллеи и широкие улицы
Форма	штамбовое дерево

'Swat Magret' is a large tree with a broad oval to round crown that can reach an ultimate height of 25 m or more. The bark is smooth and grey in colour. The oval to ovoid leaves sprout deep red and turn intense brownish red to blackish red during summer. 'Swat Magret' was selected in 1895 by G. Frahm, Elmshorn, Germany, because of its, compared to other red beeches, very large leaves and very dark leaf colour. At 10-13 cm long, the leaves are indeed somewhat larger than usual. The leaf edges are remarkably wavy. Suitable for use as avenue and park tree, but also as a hedge plant. Thrives best in well-drained, not too wet, humus-rich soils. Moderately wind resistant. Hardiness zone: 5b
