

Hippophae rhamnoides 'Hergo'

да

Высота	2-4 м
Ширина	2-4м
Крона	broad vase-shaped, dark, dense crown, capricious growing
Кора и ветви	grey
Лист	green, grey-green
Осенний окрас	желтый
Цветы	yellow
Плоды	yellow, orange
Колючки/шипы	Yes
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, nutrient-poor soil
Влажность почвы	устойчив к сухим почвам
Мощение	неустойчив к мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	very good, also sea wind
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру, устойчив к соли для улиц
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, устойчив к соли для улиц, дерево-источник питания для птиц
Применение	кашпо для деревьев, побережье, небольшие сады, сады в патио

'Hergo' grows into a sturdy shrub or small tree with a broad oval crown and slightly arching twigs. It is a fairly strong-growing cultivar with somewhat more regular branching and therefore a more regular shape than the species *H. rhamnoides*. The twigs are relatively thin and not very densely covered with thorns. 'Hergo' is a female cultivar whose bright orange fruits ripen around the beginning of September. The fruits are ovoid to short cylindrical.

The fruit stalks are not very strong and the fruits are relatively loose on the branches. According to German research, this makes 'Hergo' the best cultivar for harvesting fruit by machine. This also makes this cultivar suitable for large-scale buckthorn fruiting. To produce fruit, pollination by a male cultivar ('Pollmix') must take place. Hardiness zone 4.
