

## Juglans regia 'Broadview'

<b>Высота</b>	15-20 m
<b>Ширина</b>	15-20m
<b>Крона</b>	round/spherical, half-open crown
<b>Кора и ветви</b>	grey
<b>Лист</b>	green, feathered leaf
<b>Цветы</b>	green, flowers in May
<b>Плоды</b>	edible fruits, brown
<b>Колючки/шипы</b>	None
<b>Ядовитость</b>	неядовитый, обычно
<b>Вид почвы</b>	clayed soil, loamy soil, sandy soil, calcareous soil
<b>Мощение</b>	неустойчив к мощению
<b>Зона зимостойкости</b>	5b (-26,0 до -23,4 °C)
<b>Устойчивость к ветру</b>	good
<b>Прочие виды устойчивости</b>	устойчив к морозам, зона 1 - 6, сустойчив к ветру
<b>Применение</b>	аллеи и широкие улицы
<b>Форма</b>	штамбовое дерево, штамбовое фруктовое дерево

Juglans regia 'Broadview' is slower growing than the species and remains smaller. Height approx. 15 - 20 m. Suitable for smaller gardens. The shape of the crown, the trunk, the branches and leaves are identical to those of the species. After the emergence of the leaves the male and female flowers appear. They do not appear simultaneously. For this reason it is recommended that another cultivar, e.g. 'Buccaneer', should be planted close by to act as a pollinator. However fructification can be apomictic whereby solitary trees can also produce a reasonable quantity of fruit. Winter hardiness zone: 5b
