

Juglans regia 'Coenen'

Высота	10-15 m, fast growing
Ширина	8-12m
Крона	round/spherical, half-open crown
Кора и ветви	grey
Лист	green, feathered leaf
Цветы	yellowgreen, flowers in May
Плоды	edible fruits, brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, calcareous soil
Мощение	неустойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Применение	аллеи и широкие улицы
Форма	штамбовое дерево, штамбовое фруктовое дерево

Juglans regia 'Coenen' is a strong, vigorous tree with a broad, loose and open crown, attaining a height of 20 - 30 m. Trunk, branches and leaves are identical to those of the species. The leaves appear early in the year, which increases the risk of damage by night frost. After the emergence of the leaves the male and female flowers appear. They appear roughly simultaneously so that pollination is possible. But for effective pollination it is recommended that another type be planted close by, e.g. J. 'Buccaneer'. Winter hardiness zone: 5b
