

Juglans regia 'Guillot'

Высота	15 - 25 m
Ширина	15-20m
Крона	round, irregular, half-open crown
Кора и ветви	branches grey-brown, bark light grey, deeply grooved
Лист	imparipinnate, bright green, 20 - 30 cm, with 5 - 9 (11) leaf segments, feathered leaf
Цветы	pendent catkins, 6 - 8 cm, 2 or 3 together, May/June
Плоды	none, sterile cultivar, fruitless cultivar
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	limy, moist soil
Мощение	неустойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, устойчив к ветру
Применение	аллеи и широкие улицы
Форма	штамбовое дерево
Происхождение	Gilles Bourne, France

Large tree with rather irregular, round crown, 15 - 25 m tall. The crown is formed by heavy boughs. Mature bark light grey with deep, longitudinal grooves. The imparipinnate leaf grows 20 - 30 cm long and consists of 5 - 9, occasionally 11 leaf segments. These are ovate to oval and 8 - 12 cm long. After the leaf development, the male catkins and the smaller female flowers appear, the latter in groups of 2 or 3. The blossoms are fairly inconspicuous. The distinguishing feature of 'Guillot' is that this cultivar is sterile, so will bear no nuts. Highly suitable for use in parks, wide avenues and open verges. Roots very deeply and much prefers easily penetrable, open soil.
