

Lagerstroemia indica

Высота	4 - 8 m
Ширина	2-4m
Крона	irregular vase-shaped, half-open crown, capricious growing
Кора и ветви	young twigs light brown, winged, bark light brown-grey, scaling in thin plates
Лист	opposed, ovate to elliptical, 3 - 5 cm, green
Осенний окрас	желтый, оранжевый, красный
Цветы	white, pink or purple(-red), 3 - 4 cm, in terminal panicles, 15 - 20 cm, July/September
Плоды	dry capsule, dark brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	few soil requirements, tolerates drought
Влажность почвы	устойчив к сухим почвам
Мощение	устойчив к мощению
Зона зимостойкости	8a (-12,2 до -9,5 °C)
Устойчивость к ветру	moderate
Дерево-среда обитания для животных	медонос
Применение	кашпо для деревьев, сады на крыше, небольшие сады, сады в патио
Форма	штамбовое дерево, многоствольное дерево
Происхождение	China

Small, sometimes multi-stemmed tree with a rather irregular, vase-shaped crown, to about 8 m tall but usually shorter. The old bark flakes off in thin plates, revealing the underlying bark. This varies from light brown to a deep cinnamon brown, giving rise to an attractive pattern of brown-grey and pinkish brown hues. The leaves are yellow-green on emerging, turning dark green in summer. The flowers are grouped in large terminal panicles. They are conspicuous for their heavily undulate petals. The flower colour naturally varies between white, pink and purplish red. The autumn colour of white-blossoming trees is usually yellow. Trees that blossom pink or purplish red have orange, red or purple autumn colours. Has few demands as to soil but prefers a sunny, sheltered position. Tolerates drought.
