

Ligustrum vulgare 'Atrovirens'

Высота	2-4 m
Ширина	2-4m
Крона	dark, dense crown
Кора и ветви	brown, grey
Лист	green
Цветы	white, flowers in June-July
Плоды	black
Колючки/шипы	None
Ядовитость	ядовитые части
Вид почвы	clayed soil, loamy soil, sandy soil, peaty soil
Мощение	устойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, дерево-источник питания для птиц
Применение	кашпо для деревьев, сады на крыше, побережье, небольшие сады, сады в патио

As 'Atrovirens' always branches from the base, this shrub will not develop a tree-like habit. It is a very vigorously growing shrub up to about 3.5 m high. The leaves are oval to ovate-elongated and a healthy dark green colour. The leaves sometimes do not fall from the plant until February, making it effectively semi-evergreen. The flower panicles are relatively small at 2-4 cm long. In addition, the plant is not very floriferous. The flowers are white and open around mid-June-mid-July. They may be followed by glossy black berries, but these too are not produced in abundance. Because of its fine growth, 'Atrovirens' is extremely suitable as a hedge plant. But the shrub can also be used well in mixed plantings, although other, richer flowering species or cultivars may then be preferable. 'Atrovirens' was introduced by the German Spätsche Baumschulen in 1888. Hardiness zone 5a.
