Very densely branching, globular, later flat-topped spherical shrub up to 4 m. Usually top-grafted in order to grow a tree with a round crown. The grey bark has shallow grooves. Young twigs are light green with only very few corky fissures or none. The leaf has 5 lobes and is glossy green. It turns yellow only very late in autumn and the leaves will turn brown if there is a night frost early in the season. The flowers are inconspicuous and are followed by round, spiky capsules that persist in the winter. Good for use on housing estates, squares or in gardens. Prefers fertile, moist soil: cannot tolerate persisting drought.
