

Liriodendron tulipifera

'Aureomarginatum'

Высота	20 - 25 (35) m
Ширина	10-15m
Крона	oval, half-open crown
Кора и ветви	light grey bark, branches reddish-brown
Лист	4-lobed, green with yellow edge, 8 - 15 cm long, 9 - 18 cm wide
Осенний окрас	желтый
Цветы	tulip-shaped, green with yellow and orange, June/July
Плоды	conical fruits up to 10 cm long
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	humid and rich
Мощение	устойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, притягивает бабочек
Применение	аллеи и широкие улицы, промышленные зоны
Форма	штамбовое дерево, разветвленное дерево
Происхождение	Germany, 1865

This cultivar grows more slowly than the species and has a narrower crown that later widens. The trunk is grey and, when older, develops shallow grooves: the young twigs are greenish-grey, later reddish-brown. The leaves are 4-lobed and the top is straight to incised with a shallow V. Each leaf has a wide greenish-yellow edge that turns light green in the course of the summer. The leaves have a bluish-green underside and they turn yellow in the autumn. The flowers appear after the emergence of the leaves. They have a green exterior and a yellow plus orange interior. They are approx. 4 cm long and 6 cm broad. The conical fruit consists of many winged nutlets pressed together in a spiral. Deep loose soil is required because of the deeply penetrating fleshy taproot.
