

Maackia amurensis

Высота	8 - 12 m
Ширина	8-12m
Крона	round to wide umbel-shaped, half-open crown, capricious growing
Кора и ветви	slightly peeling, brown bark
Лист	odd-pinnate, 7 - 11 leaflets, bright green, 20 - 30 cm, feathered leaf
Цветы	erect racemes, (yellow) white, July/August
Плоды	flat pod, 3 - 6 cm long
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	high in humus content and well-drained
Влажность почвы	устойчив к сухим почвам
Мощение	неустойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	кашпо для деревьев, сады на крыше
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Manchuria, Korea and Japan

An uncommon tree with an open, round crown, becoming wide umbel-shaped later. Native to East Asia. The tree has been grown in Europe for some time and is appreciated because of its decorative foliage and flower. The mature bark is slightly peeling. The large leaf consists of 7 to 11 ovate leaflets, each 5 - 8 cm long. When unfolding the leaf is strikingly silver-grey haired. The underside remains hairy. The white flowers, each almost 1 cm, are arranged in erect racemes that are 10 - 15 cm long. The flat pods that can reach 3 - 6 cm, appear in autumn. In spite of the reliable hardiness, the Maackia amurensis prefers a sheltered site.
