

Magnolia ×loebneri 'Merrill'

Высота	circa 3 - 5 (7) m
Ширина	3-5m
Крона	vase-shaped, spreading, half-open crown, capricious growing
Кора и ветви	smooth, greenish grey
Лист	oval, bright green, 10 - 15 cm
Цветы	star-shaped, pure white, April, fragrant flowers
Плоды	rare
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	airy, well permeating
Мощение	устойчив к частичному мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, медонос
Применение	аллеи и широкие улицы, небольшие сады, сады в патио
Форма	штамбовое дерево, разветвленное дерево, многоствольное дерево
Происхождение	Arnold Arboretum, Cambridge, Massachusetts, USA, 1952

This hybrid is a crossing between *M. kobus* and *M. stellata*. It has the upright habit of *M. kobus* and the star-shaped flowers of *M. stellata*. Usually grown as a shrub but can grow into a small tree, sometimes multiple-stemmed. Young specimen grow straight upright but with age the habit becomes spreading because the branches start bending. The eventual spread often exceeds its height. The flowers appear before the leaves. The flowering is rich with star-shaped flowers that are 10 - 15 cm across. The fragrant flowers are white but the outer petals have a pink to light violet stripe, giving the impression at a distance that they are pink. Both the flowers and the flower buds are less susceptible to late night frost than the other Magnolias. *Magnolia loebneri* 'Merrill' is a highly recommended cultivar with exceptionally abundant flowers. Of all the cultivars 'Merrill' has the largest flowers.
