

Magnolia ×soulangeana

Высота	4 - 6 (9) m
Ширина	4-6m
Крона	spreading vase-shape, later spreading ovoid, half-open crown, capricious growing
Кора и ветви	grey bark, twigs purple brown and bare
Лист	obovate to oblong, fresh green, 10 - 15 cm
Цветы	tulip-shaped, white and/or pink, April/May
Плоды	red, uncommon, seed coral-red
Колючки/шипы	None
Ядовитость	нейядовитый, обычно
Вид почвы	all, intolerant to alkaline soils
Мощение	устойчив к частичному мощению
Зона зимостойкости	6 (-23,3 до -17,8 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Применение	кашпо для деревьев, сады на крыше, небольшие сады
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Étienne Soulange-Bodin, Paris, France, 1820

A hybrid between *M. denudata* and *M. liliiflora*. It is a slow-growing, large shrub that can sometimes grow into a multiple-stemmed tree. At first it has a spreading vase shape, but when maturing it spreads more, generating an ovoid crown. In the case of low branches, old branches can bend onto the ground. The spread may be as large as the height. It is one of the richest flowering Magnolias. There are more than 40 named cultivars which may differ considerably from each other with regard to the colour and the shape of the flowers. Colours vary from completely white to white with pink to dark pink hues. The flowers appear before the leaves. A late night frost may damage the flowers. As it usually concerns sterile varieties, production of fruit is practically absent. The fleshy roots grow both shallow and deep. Poor tolerance to dry soils.
