

Malus prunifolia 'Fastigiata'

Высота	5-7 m
Ширина	3-4m
Крона	vase-shaped, half-open crown
Кора и ветви	brown, grey
Лист	green
Цветы	white, flowers in May
Плоды	yellow, red
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, acid soil
Мощение	устойчив к частичному мощению
Зона зимостойкости	3 (-40,0 до -24,5 °C)
Устойчивость к ветру	good, susceptible to sea wind
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, дерево-источник питания для птиц
Применение	узкие улицы, промышленные зоны, небольшие сады, сады в патио
Форма	штамбовое дерево, многоствольное дерево

The crown of Malus prunifolia 'Fastigiata' is columnar when young, after a few years the crown widens and eventually becomes semi-open, broadly vase-shaped to fan-shaped. The tree grows about 5-7 m tall. In April, the pinkish-white flowers open, blushing white. The flower buds are slightly reddened. The flowers are single and about 5 cm in size. They are followed by many, circa 2 cm large round ornamental apples. These are yellow with a red blush. The weight of the many fruits causes the branches to bend, which will widen the crown. M. prunifolia 'Fastigiata' flowers very abundantly, but has alternate years, so that flowering and fruiting are not equally abundant every year. The tree will grow in almost any soil, provided it is well-drained. Tolerates wind, but not sea wind.

The exact origin of 'Fastigiata' is not known, the tree first appearing in 1906 in a nursery of the USDA, the US Department of Agriculture. The tree is extremely hardy, hardiness zone 3.
