

Morus alba 'Pendula'

Высота	4 - 6 m
Ширина	5-7m
Крона	broad weeping , half-open crown
Кора и ветви	light grey, bark has regular grooves
Лист	ovoid to heart-shaped, bright green, 8 - 14 cm
Цветы	unremarkable pendulous catkins, green, May/June
Плоды	mostly white, sometimes reddish, 1 - 2.5 cm long, edible fruits
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	light, well-drained soil, preferably calcareous
Влажность почвы	устойчив к сухим почвам
Мощение	неустойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, дерево-источник питания для птиц
Форма	штамбовое дерево, разветвленное дерево
Происхождение	Italy, 1890

A cultivar of the white mulberry grafted on a stem. It forms a small tree with branches that grow vertically downwards at first. In older specimens the branches grow out somewhat in the width. It can eventually attain a maximum width of 4 m. The final height attained depends on the height of the graft. M. alba is used as the graft trunk. The irregularly shaped leaves are often deeply incised and can grow to a length of approx. 14 cm. The leaves are a glossy light green and rough to the touch. The monoecious tree has unremarkable male and female flowers. The small fruits resemble raspberries and are edible. They have a bland to slightly sweet taste. This is a tree for a sunny, warm, sheltered site. Saplings are sensitive to frost. Likes chalky soils and grows in poor soil.
