

## Parrotia persica 'Bella'

|                          |                                                                      |
|--------------------------|----------------------------------------------------------------------|
| Высота                   | 8-10 m                                                               |
| Ширина                   | 3-5m                                                                 |
| Крона                    | oval, half-open crown, capricious growing                            |
| Кора и ветви             | twigs olive brown, bark light gray with (purple) brown spots, smooth |
| Лист                     | oval to obovate, 7-10 cm long, glossy dark green                     |
| Осенний окрас            | желтый, оранжевый, красный, фиолетовый                               |
| Цветы                    | red, flowers in February-march                                       |
| Плоды                    | spiked capsule, about 1 cm                                           |
| Колючки/шипы             | None                                                                 |
| Ядовитость               | неядовитый, обычно                                                   |
| Вид почвы                | loamy soil, sandy soil, peaty soil, nutrient-poor soil, acid soil    |
| Влажность почвы          | устойчив к сухим почвам, устойчив к коротким наводнениям             |
| Мощение                  | неустойчив к мощению                                                 |
| Зона зимостойкости       | 5a (-28,8 до -26,1 °C)                                               |
| Устойчивость к ветру     | good                                                                 |
| Прочие виды устойчивости | устойчив к морозам, зона 1 - 6, сустойчив к ветру                    |
| Применение               | кашпо для деревьев, сады на крыше                                    |
| Форма                    | штамбовое дерево, разветвленное дерево, многоствольное дерево        |

'Bella' is a good-growing, small to medium-sized tree growing 8-10 m tall. Whereas the species *P. persica* tends to have an irregularly shaped crown, this is much less the case with 'Bella'. This is caused by the well-through heart branch. The twigs and older bark have the same beautiful colours as *P. persica*. The foliage turns deep red in spring. In summer it is a glossy dark green and already towards the end of the summer it starts to turn red again, before turning deep purple to purple in autumn. The flowering too is like *P. persica*. In itself not spectacular, but because the tree already flowers in February-March, i.e. before the leaves develop, the red flower bundles do stand out.
