

Platanus orientalis 'Minaret'

Высота	8 - 12 m
Ширина	6-7m
Крона	column-shaped, dark, dense crown
Кора и ветви	bark flakes off, young twigs reddish-purple
Лист	palmatifid to palmate, dark green, 8 - 10 cm
Цветы	rounded, yellow-green, May/June
Плоды	fruit heads, 3 - 6 together, on a long stem
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	all, preferably somewhat humid and calcareous
Мощение	устойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру, устойчив к соли для улиц
Применение	аллеи и широкие улицы, узкие улицы
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Leenderheim Nursery, Leende, The Netherlands, 1997

This oriental plane tree cultivar was found as a seedling of *P. orientalis* 'Digitata'. It forms a compact column-shaped crown with very dense branches and grows more slowly than the species. The bast is yellow, and the green (sometimes grey) bark flakes off in small plates. This produces the characteristic plane bark. Young shoots and leaf stalks are a remarkable purple-red in colour. The leaves are deeply incised and usually have 5 - 7 lobes with serrated points. The autumn colour is yellow. The spherical flowers are covered with protruding hairs. The fruit, that turns colour from green to brown and measures approx. 2.5 cm in diameter, appears after flowering. The fruit hangs in groups of 3 to 6 and remains on the tree until deep into the winter. Saplings are sensitive to frost.
