

## Prunus serrula

|                                    |                                                                   |
|------------------------------------|-------------------------------------------------------------------|
| Высота                             | 6 - 8 m                                                           |
| Ширина                             | 6-8m                                                              |
| Крона                              | round, half-open crown, capricious growing                        |
| Кора и ветви                       | twigs dark brown, bark glossy mahogany red, flaking profusely     |
| Лист                               | elongated to lanceolate, light green, 4 - 9 cm, autumn colour red |
| Осенний окрас                      | красный                                                           |
| Цветы                              | cream & white, about 2 cm, April                                  |
| Плоды                              | oval, red, about 1 cm                                             |
| Колючки/шипы                       | None                                                              |
| Ядовитость                         | неядовитый, обычно                                                |
| Вид почвы                          | any, if well drained                                              |
| Мощение                            | неустойчив к мощению                                              |
| Зона зимостойкости                 | 6a (-23,3 до -20,6 °C)                                            |
| Устойчивость к ветру               | fairly                                                            |
| Прочие виды устойчивости           | устойчив к морозам, зона 1 - 6                                    |
| Дерево-среда обитания для животных | устойчив к морозам, зона 1 - 6, медонос                           |
| Применение                         | аллеи и широкие улицы, кашпо для деревьев, небольшие сады         |
| Форма                              | штамбовое дерево, многоствольное дерево                           |
| Происхождение                      | Western China                                                     |
| Синонимы                           | Prunus tibetica Hort.                                             |

This tree has a rounded, quite broad and semi-transparent loose crown. Height approx. 6 - 8 m. The beautiful shiny and very flaky bark is mahogany brown. Sturdily growing specimens have the most beautiful trunks. The light green leaves are elongated and the leaf edge is fine and regularly serrated. The leaves turn red in the autumn. It flowers in April-May, producing unremarkable creamy white flowers in bundles of 2 to 4 together. The flowers, approx. 2 cm in size, are followed by oval red fruits, Ø approx. 1 cm. P. serrula is used as a park tree and a solitary. It does not stand up to wet soil. Winter hardiness zone: 6a
