

Prunus 'The Bride'

Высота	5 - 8 m
Ширина	5-6m
Крона	broad vase-shaped to flat-topped spherical, half-open crown
Кора и ветви	twigs grey, bark grey-brown
Лист	narrow ovate to elongated, tip long pointed , fresh green, 6 - 8 cm
Осенний окрас	оранжевый, красный, фиолетовый
Цветы	white with pink stamens, earl ♂ April
Плоды	round, slightly oval, dark red, Ø approx. 1 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	nutrient-rich, moist but well-drained soil
Мощение	неустойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, дерево-источник питания для птиц
Применение	кашпо для деревьев, небольшие сады
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Arboretum Kalmthout, Kalmthout, Belgium, ca. 1989

Small to medium-size tree, initially with quite narrow crown, but quickly broad vase-shaped. Later the branches overhang somewhat which may create a flat-topped, spherical crown. The leaf is narrow ovate to elongated and has a long pointed tip. It emerges as bronze-green and turns fresh green in summer. In autumn it displays various colours: orange, red and purple before falling. The flower buds are pink. Before the leaf emerges the tree blossoms very abundantly with large, single, white flowers with striking pink stamens. They may be followed by dark red, round to slightly oval fruits. 'The Bride' was found as a seedling of P. 'Pandora' by Harry van Trier. A good alternative to P. x yedoensis, which grows significantly larger. Does not tolerate permanently high water table.
