

Pyrus calleryana 'Redspire'

Высота	8 - 12 m
Ширина	6-8m
Крона	narrow pyramidal to oval, half-open crown
Кора и ветви	greyish brown, shallow grooves, sharp, thorny twigs
Лист	oval to broad oval, glossy green, 4 - 10 cm
Осенний окрас	желтый, красный, фиолетовый
Цветы	white, in plentiful umbels, April/May
Плоды	round, approx. 1 cm Ø, brown with lighter lenticels
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	places little demands
Мощение	устойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	good, also on the coast
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, медонос
Применение	аллеи и широкие улицы, узкие улицы, кашпо для деревьев, сады на крыше, побережье, промышленные зоны, небольшие сады
Форма	штамбовое дерево
Происхождение	Princeton Nurseries, Princeton, New Jersey, USA, 1975

An American cultivar with a narrow, vertical, conical to oval crown. Remains slightly narrower than 'Chanticleer'. Height 8 to 12 m. Compact manner of growth. Old bark is rough and greyish brown. The healthy, glossy green leaves turn lovely colours in the autumn, usually yellow, but also purplish red tints. Remain on the tree until late in the autumn. Profuse flowers. The white flowers grow in umbels of 6 to 12. Each flower is approx. 2.5 cm in diameter and is thus somewhat larger than the flowers of 'Bradford' for example. The fruit is brown with lighter lenticels and appears rarely. Suitable as a solitary tree and along narrow avenues and streets. Deep root system. Prefers neutral to slightly calcareous soil. Also grows in poor soil. Well resistant to air pollution.
