

Quercus x kewensis

Высота	10 - 15 m
Ширина	5-10m
Крона	broad oval to round, half-open crown
Кора и ветви	twigs light brown, hairy, bark first grey and smooth, later almost black and grooved
Лист	oval to oval-elongated, shallow lobed, matt dark green, 5 - 8 cm, evergreen
Цветы	catkins, May
Плоды	approx. 2.5 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	few requirements
Мощение	неустойчив к мощению
Зона зимостойкости	7b (-14,9 до -12,3 °C)
Устойчивость к ветру	fairly, cannot tolerate cold, drying wind
Прочие виды устойчивости	устойчив к соли для улиц
Применение	промышленные зоны
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Royal Botanic Gardens, Kew, London, England, 1914

Medium-size to large tree with a broad oval, eventually round crown. The young twigs are light brown covered with short stellate hairs. The older bark is first grey and smooth but later almost black and grooved. The semi-evergreen leaves are oval to oval-elongated, 5 to 8 cm long. The margin is shallow-lobed with 5 - 6 rounded triangular lobes. The leaf is matt dark green on top and glossy, lighter green on the underside. The tree produces about 2.5 cm large acorns which ripen in two years. However the acorns usually fall from the tree before they are ripe. This species hybrid between *Q. wizlizenii* and *Q. cerris* was found in the Royal Botanic Garden Kew by coincidence in 1914. The hybrid species name *kewensis* refers to this. This park tree requires a sheltered site and cannot tolerate cold, drying wind.
