

## Quercus robur 'Pendula'

<b>Высота</b>	10 - 15 (20) м
<b>Ширина</b>	10-15m
<b>Крона</b>	broad weeping, half-open crown
<b>Кора и ветви</b>	dark grey, deep grooves, twigs reddish-brown
<b>Лист</b>	obovate, lobed, green, 5 - 14 cm
<b>Цветы</b>	greenish-yellow catkins, 2 - 4 cm long, May
<b>Плоды</b>	ovoid to oval acorn, 1.5-2.5 cm, in groups of 2 to 6
<b>Колючки/шипы</b>	None
<b>Ядовитость</b>	неядовитый, обычно
<b>Вид почвы</b>	nutritious and moist
<b>Влажность почвы</b>	устойчив к влажным почвам
<b>Мощение</b>	неустойчив к мощению
<b>Зона зимостойкости</b>	5a (-28,8 до -26,1 °C)
<b>Устойчивость к ветру</b>	good
<b>Прочие виды устойчивости</b>	устойчив к морозам, зона 1 - 6, сустойчив к ветру, устойчив к соли для улиц
<b>Применение</b>	промышленные зоны
<b>Форма</b>	штамбовое дерево, многоствольное дерево
<b>Происхождение</b>	England, 1788
<b>Синонимы</b>	Quercus robur var. dauvessii

Ornamental weeping form attaining 10-15 (20) m in height and 7 - 15 m in breadth. The branches grow somewhat away from the trunk and the twigs are very pendulous. They sometimes grow 2 m in length per year and touch the ground. The bark is dark grey, later grooved. Young twigs are reddish-brown. The variable leaves are obovate to elongated oval, 5 - 14 cm long and 4 - 8 cm wide, with 3 to 5 pairs of blunt lobes. The foliage is often densely grouped at the end of the twigs. The leaves emerge brownish-red in the spring. They do not remain on the tree for long in the winter, which produces a pronounced winter silhouette. The ovoid acorns are grouped in twos to sixes and are a maximum of one-third enclosed in the cupule: the latter is covered with small, triangular, contiguous scales. Very suitable as an arbour tree.
