

## Salix fragilis

<b>Высота</b>	10 - 15 m, fast growing
<b>Ширина</b>	8-12m
<b>Крона</b>	round, half-open crown
<b>Кора и ветви</b>	twigs brownish yellow, bark grey, grooved
<b>Лист</b>	lanceolate, glossy dark green, (5) 9 - 15 cm
<b>Цветы</b>	elongated, and catkins, yellow-green, 3 - 6 cm, April/May
<b>Плоды</b>	catkins, approx. 4 - 6 cm long
<b>Колючки/шипы</b>	None
<b>Ядовитость</b>	неядовитый, обычно
<b>Вид почвы</b>	few requirements, tolerates wet to marshy soil
<b>Влажность почвы</b>	устойчив к влажным почвам, устойчив к коротким наводнениям, устойчив к длительным наводнениям
<b>Мощение</b>	устойчив к частичному мощению
<b>Зона зимостойкости</b>	5 (-28,8 до -23,4 °C)
<b>Устойчивость к ветру</b>	good
<b>Прочие виды устойчивости</b>	устойчив к морозам, зона 1 - 6, сустойчив к ветру
<b>Дерево-среда обитания для животных</b>	устойчив к морозам, зона 1 - 6, сустойчив к ветру, притягивает бабочек
<b>Применение</b>	аллеи и широкие улицы
<b>Форма</b>	штамбовое дерево, многоствольное дерево
<b>Происхождение</b>	Europe, Asia Minor

Strong medium-size tree with a round crown, usually formed from a few heavy boughs. The yellowish brown young twigs are sometime slightly red. They stand at a rather obtuse angle to the older branches. Initially hairy, they quickly become hairless. The twigs break easily which is a namesake feature of the tree in various languages. However it is not the only species whose twigs break easily, so this feature is not crucial. The glossy dark green leaves give the tree a healthy appearance. The catkins ripen in April/May. They are yellow-green and 3 - 6 cm long, the female catkins turning light brown at the fruit stage. Grows on almost any soil, including infertile. Tolerates wet to marshy soil. This makes the tree suitable for river banks, including as a pollard willow.
