

## Salix viminalis

Высота	4-6 (9) m, fast growing
Ширина	4-6m
Крона	round to fan-shaped, half-open crown
Кора и ветви	grey-green
Лист	shiny green
Осенний окрас	желтый
Цветы	catkins, light yellow, flowers in February-March
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil
Влажность почвы	устойчив к влажным почвам, устойчив к коротким наводнениям, устойчив к длительным наводнениям
Мощение	устойчив к частичному мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	very good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, притягивает бабочек
Форма	штамбовое дерево, многоствольное дерево

Salix viminalis grows from a large shrub with often very long twigs, into a small tree to about 6 m in height, higher in exceptional cases. The densely branched crown is eventually round to fan-shaped. The bark remains smooth for a long time and will only become longitudinally grooved on old trees. The green to brownish-grey young twigs are fine and densely hairy. The fairly large leaves are remarkably narrow. On top, they are a glossy dark green and slightly hairy. The underside is shiny silver-grey and felt-like. In autumn, they often turn yellow before falling off.

The flower catkins appear in late winter and, with a greenish yellow to pale yellow colour, are not very conspicuous. The flowers open around February-March. The male flowers always have two stamens.

Salix viminalis grows naturally in moist to wet but nutrient-rich soil, on river banks and in pilot whales. However, S. viminalis will also grow in less wet locations, provided the soil is sufficiently nutrient-rich. The tree is suitable for landscape planting, in wadis and on banks.
