

## Sorbus alnifolia

Высота	8 - 12 (15) m
Ширина	4-8m
Крона	ovoid to round, half-open crown
Кора и ветви	smooth dark grey bark, branches purplish-brown
Лист	oval, top with a short point, remarkable lateral veins, dull green, 5 - 11 cm
Осенний окрас	оранжевый, красный, фиолетовый
Цветы	in umbels, Ø approx. 5 cm, white, May/June
Плоды	round to oval, red with yellow, Ø 0.8 - 1.5 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	well drained nutritious soil
Мощение	устойчив к частичному мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	fairly
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, дерево-источник питания для птиц
Применение	аллеи и широкие улицы
Форма	штамбовое дерево
Происхождение	East Asia
Синонимы	Micromeles alnifolia

Originally from East Asia where it attains a height of approx. 15 m. In Europe it remains smaller, up to approx. 8 - 10 m. The tree has dark grey smooth bark. Young twigs are olive-brown and later turn darker. The leaf buds are a remarkable reddish-brown. The oval leaves closely resemble those of the alder (Alnus). They have 10 - 15 pairs of remarkable veins and the leaf edge is finely serrated. They are matt green on the upper side, light green and slightly hairy to bare on the underside. They turn to shades of pink, orange and red in the autumn. Flowering is followed by yellow fruits that slowly turn red. At various stages they have exceptional ornamental value in the autumn. Cross-pollination is required for fructification. Therefore, it is recommended that several specimens should be planted together.
