

Sorbus 'Dodong'

Высота	10 m
Ширина	4-5m
Крона	ovoid, half-open crown
Кора и ветви	twigs brown, bark grey, smooth
Лист	imparipinnate, 20 - 30 cm, with 15 - 17 elongated to narrow ovate leaf segments, glossy dark green, feathered leaf
Осенний окрас	оранжевый, красный
Цветы	white, in corymbs, May/June
Плоды	orange-red, pear-shaped
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	few requirements, can grow on infertile soils
Влажность почвы	устойчив к сухим почвам
Мощение	устойчив к частичному мощению
Зона зимостойкости	5 (-28,8 до -23,4 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, дерево-источник питания для птиц
Применение	аллеи и широкие улицы
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Swedish University of Agricultural Sciences, Alnarp, Sweden, 1992
Синонимы	Sorbus commixta 'Dodong'

Medium-size tree, initially with narrow oval crown, eventually with an ovoid crown to 10 m tall and 6 to 8 m wide. Twigs are brown, old bark is grey and smooth. The imparipinnate leaves consist of 15 - 17 leaf segments. They are glossy dark green and in autumn turn intensely orange-red to red. In May and June the white flowers appear in wide corymbs. They are followed by more or less pear-shaped, orange-red fruits that remain on the tree until into winter, provided they are not eaten by birds. Healthy tree that was named in a Swedish research programme. The seed from which 'Dodong' was produced was collected in 1976 by a Swedish-Danish expedition to the Korean island of Ullung Do. Dodong is the name of the island's port.
