

Sorbus latifolia

Высота	12 - 15 m
Ширина	6-10m
Крона	broad pyramidal, half-open crown
Кора и ветви	grey and smooth, young twigs reddish-brown with white hairs
Лист	ovoid, 4-lobed, glossy dark green, 6 - 12 cm
Цветы	white, in umbels up to 10 cm wide, May
Плоды	(reddish-) brown to orange-yellow, Ø 1 - 1.5 cm, abundant
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	makes few demands, can grow on poor soils
Влажность почвы	устойчив к сухим почвам
Мощение	устойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, дерево-источник питания для птиц
Применение	аллеи и широкие улицы, промышленные зоны
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Central Europe

Robust and fast growing tree with a broad, pyramidal, remarkably symmetrical crown. The trunk is grey and smooth and the young twigs are glossy reddish-brown and bear white hairs. Later they become bare. The broad ovoid to almost round and sturdy leathery leaves are glossy dark green. On the underside they are felt-like and yellowish-grey. The young emerging leaves also bear white felt-like hairs. The shallow-lobed leaf edge is serrated. In late May the umbels of creamy white flowers appear. In the late summer the (brownish-) red to orange-yellow berries emerge. *S. latifolia* bears an exceptionally abundant amount of fruit. The tree is very useful in industrial areas and stands up well to hard surfaces.
