

Sorbus latifolia 'Atrovirens'

Высота	8-10 m
Ширина	6-10m
Крона	broad conical, half-open crown
Кора и ветви	grey
Лист	green, white
Цветы	cream white, flowers in May
Плоды	yellow, orange, red, brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	loamy soil, sandy soil, nutrient-poor soil
Влажность почвы	устойчив к сухим почвам
Мощение	устойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, дерево-источник питания для птиц
Применение	аллеи и широкие улицы, промышленные зоны
Форма	штамбовое дерево

A frequently used, robust and fast-growing cultivar of *S. latifolia* with a broad pyramidal and remarkably symmetrical crown. Height up to 10 m. The grey trunk is smooth and the young twigs are reddish-brown with white hairs. The broad ovoid to almost round and sturdy leathery leaves are glossy dark green. On the underside they are felt-like and yellowish-grey. The young emerging leaves also bear white felt-like hairs. They remain smaller than those of the species and remain hanging on the tree for a long time in the autumn. In late May the cream-coloured flowers appear and are followed in late summer by numerous brownish-red to orange-yellow fruits. Reasonably resistant to bacterial fire blight and very wind-resistant. Winter hardiness zone: 5a
