

Styrax japonicus 'June Snow'

Высота	10 - 12m
Ширина	6-8m
Крона	narrow pyramidal, half-open crown
Кора и ветви	twigs yellow-brown to brown, bark dark grey, slightly grooved
Лист	oval to elongated, glossy green, 5 - 11 cm
Цветы	in pendent racemes, white with yellow stamen, 2 - 2.5 cm, June, fragrant flowers
Плоды	ovoid drupe
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	moist, light loamy and humic soil
Мощение	неустойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	fairly
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, дерево-источник питания для птиц
Применение	кашпо для деревьев, сады на крыше
Форма	штамбовое дерево, разветвленное дерево, многоствольное дерево
Происхождение	Chris van der Wurff, Heeze, the Netherlands, 1995

Medium-size tree selected because of its quite compact regularly shaped, narrow pyramidal crown. After 15 years, the original tree was 8 m tall: it is expected to grow to 10 to 12 m eventually. The twigs and bark are the same as the species. The leaves are oval to elongated, glossy green and at 5 - 11 cm slightly larger than the species. In late autumn the leaf turns greenish-yellow before it falls. The flowers open in June. Like the species they are white with yellow stamens with a strong and pleasant fragrance. The tree usually blossoms very abundantly making it very bee friendly. The flowers are followed by hard, ovoid grey-green drupes with a dark green calyx. Thanks to its regular and narrow pyramidal crown, 'June Snow' is very suitable for green borders, long avenues and gardens.
