

Syringa vulgaris 'Charles Joly'

| | |
|------------------------------------|--|
| Высота | 3-4 m |
| Ширина | 2-3m |
| Крона | broad oval, half-open crown |
| Кора и ветви | flaking, brown, grey |
| Лист | green |
| Цветы | dark purple, flowers in April-May, fragrant flowers |
| Плоды | brown |
| Колючки/шипы | None |
| Ядовитость | неядовитый, обычно |
| Вид почвы | clayed soil, loamy soil, sandy soil, peaty soil, all soil types |
| Мощение | неустойчив к мощению |
| Зона зимостойкости | 4 (-34,4 до -28,9 °C) |
| Устойчивость к ветру | good |
| Прочие виды устойчивости | устойчив к морозам, зона 1 - 6, сустойчив к ветру |
| Дерево-среда обитания для животных | устойчив к морозам, зона 1 - 6, сустойчив к ветру, притягивает бабочек |
| Применение | кашпо для деревьев, сады на крыше, небольшие сады |
| Форма | штамбовое дерево, многоствольное дерево |

'Charles Joly' is a large shrub to small tree with a broad oval crown of 3-4 m in height. The young twigs are slightly reddish-tinged. The old bark is grey-brown and flakes off slightly in small patches later in life. The broad ovoid leaves are mid-green in colour. The flower panicles are large and relatively narrow. They are about 12-22 cm long and 7-10 cm wide. The individual flowers, measuring about 1.6 cm, are relatively small. The flower buds are very dark purple. The opened flowers are dark purple and semi-filled. As the inner petals of the flowers are often raised and slightly twisted, the lighter purple underside is visible, creating a two-coloured effect. The flowers have a strong and pleasant fragrance. The flowers open in the second half of April and first week of May.

Syringa vulgaris grows in any nutritious and humus-rich soil. The plant prefers neutral to calcareous soil. 'Charles Joly' is very suitable for use in parks and gardens and was introduced in 1896 by Victor Lemoine & Fils in Nancy, France. Hardiness zone 4.
