

Ulmus x hollandica 'Wredei'

Высота	7 - 12 m
Ширина	3-5m
Крона	at first columnar, later rounded, half-open crown, capricious growing
Кора и ветви	smooth grey bark, twigs brown to reddish-brown
Лист	ovoid to broad elliptical, golden yellow, later greenish-yellow, 8 - 12 cm
Цветы	grouped in fours in small bundles, reddish-brown, March/April
Плоды	winged nutlets, light red seed
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	moist and light, favours calcareous soils
Влажность почвы	устойчив к влажным почвам, устойчив к коротким наводнениям
Мощение	неустойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	sensitive to (sea) wind
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	аллеи и широкие улицы, побережье, промышленные зоны, небольшие сады
Форма	штамбовое дерево, разветвленное дерево
Происхождение	Wrede, Germany, 1877
Синонимы	Ulmus carpinifolia var. wredei, Ulmus campestris dampieri aurea

Small tree with a columnar-pyramidal shape in the early years that eventually becomes round. The grey trunk is smooth and the twigs are brown to reddish-brown. The ovoid to broad elliptical leaves are remarkable for their golden yellow colour. Intensely yellow especially in the spring, they can turn to green in the course of the summer. The scalloped, somewhat rough leaves are pressed against the twig. Before the leaves appear the tree flowers: this is then followed by winged nutlets. There are probably several clones of 'Wredei' in existence. They differ in manner of growth: from pyramidal to rounded. This tree occurred as a sport of 'Dampieri': 'Wredei' resembles the latter most closely. It is one of the most remarkable elms and is still used frequently.
