

## Ulmus 'Camperdownii'

<b>Высота</b>	6 - 10 м
<b>Ширина</b>	6-8м
<b>Крона</b>	broad weeping, dark, dense crown
<b>Кора и ветви</b>	smooth, silver-grey, later dark grey with black grooves, twigs brown
<b>Лист</b>	broad obovate, upper side rough, dark green, 8 - 16 cm
<b>Цветы</b>	in dense bundles on short stems, light green, March/April
<b>Плоды</b>	flat winged nutlets, round to elliptical, brown
<b>Колючки/шипы</b>	None
<b>Ядовитость</b>	неядовитый, обычно
<b>Вид почвы</b>	moist and light, favours calcareous soils
<b>Влажность почвы</b>	устойчив к влажным почвам, устойчив к коротким наводнениям
<b>Мощение</b>	неустойчив к мощению
<b>Зона зимостойкости</b>	5a (-28,8 до -26,1 °C)
<b>Устойчивость к ветру</b>	good
<b>Прочие виды устойчивости</b>	устойчив к морозам, зона 1 - 6, устойчив к ветру
<b>Дерево-среда обитания для животных</b>	устойчив к морозам, зона 1 - 6, устойчив к ветру, привлекает бабочек
<b>Форма</b>	штамбовое дерево
<b>Происхождение</b>	Camperdown House, Dundee, Scotland, 1850
<b>Синонимы</b>	Ulmus glabra 'Camperdownii'

Handsome weeping tree with sturdy drooping branches that often reach the ground. Forms a closed crown. Is grafted onto *U. glabra*, usually at a height of between 2 and 2.5 m. The trunk of the young tree is smooth and silver-grey: later it turns dark grey with black grooves: old trunks have a network of grooves. Young twigs are brown, slightly hairy and have lenticels: later they become bare and greyish-brown. The large leaves grow close together, which causes dense foliage to develop so that the leaves cover the entire branch. The leaves are hairy on both sides and roughly serrated: the upper side feels rough. On one side the leaf stalk is covered by the asymmetrical foot, a characteristic of elm leaves. Very thick flower buds open just before the leaves emerge. Sensitive to Dutch elm disease.
