

Ulmus parvifolia 'Dynasty'

Высота	6 - 12 m
Крона	round to broad vase-shaped, dark, dense crown
Кора и ветви	twigs glossy grey-brown, bark brown-grey, peeling in small platelets
Лист	ovate to elliptical, slightly crooked, glossy dark green, 2 - 5 cm
Осенний окрас	оранжевый, красный
Цветы	in dense clusters, green, September
Плоды	flat winged nutlets, oval, red
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	fertile, moist and airy, tolerates limy soil
Влажность почвы	устойчив к сухим почвам, устойчив к коротким наводнениям
Мощение	устойчив к мощению
Зона зимостойкости	6 (-23,3 до -17,8 °C)
Устойчивость к ветру	fairly to good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Применение	аллеи и широкие улицы, промышленные зоны
Форма	штамбовое дерево
Происхождение	U.S. National Arboretum, Washington, DC, USA, 1994

A medium-size tree with a dense, round to broad vase-shaped crown and a height of 6 - 12 m. The young twigs are glossy brown and slightly hairy, but rapidly become hairless. The old bark is brown-grey and peels in small plates, although the orange bast is less prominent than it is on Bosque. The ovate to elliptical leaf has a maximum length of 5 cm. In summer it is glossy dark green and in autumn it turns dark orange to red. It only falls in late autumn. The tree blossoms in September with clusters of inconspicuous green flowers, followed by red seeds enclosed in wings. The parents of 'Dynasty' were created under an older Japanese crossbreeding programme. Its good resistance to Dutch elm disease makes it worth considering as a park and avenue tree. It has a great adaptability to various soil types, tolerates drought, a lot of warmth and is wind resistant.
