

Zelkova serrata 'Urban Ruby'

Высота	10-12 m
Ширина	5-6m
Крона	vase-shaped, half-open crown, capricious growing
Кора и ветви	flaking, grey, orange
Лист	green
Осенний окрас	желтый, оранжевый, красный
Цветы	green, flowers in May-June
Плоды	green, brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, peaty soil
Мощение	устойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	аллеи и широкие улицы, кашпо для деревьев
Форма	штамбовое дерево, многоствольное дерево

'Urban Ruby' is a medium-sized tree with a vase-shaped crown of 10-12 m in height. As with the species *Z. serrata*, the grey-brown bark peels off after a few years, revealing the orange-brown underbark. The tips of the young branches are slightly overhanging, giving the tree a graceful habit. The ovoid to oblong leaves are up to 9 cm long and dark green. The most striking feature of 'Urban Ruby' is that the young leaves are dark red. In autumn, the leaves turn bronze red to orange-red. Flowering is insignificant and the small, bean-shaped fruits are not very striking either. 'Urban Ruby' is a lovely park tree, but also suitable for use in wide avenues and greenbelts. The fact that the tree grows slightly less vigorously than the species *Z. serrata* is an advantage. The tree grows in any humous, loamy soil, provided it is sufficiently moist. 'Urban Ruby' was introduced by Hanno Hardijzer from Boskoop before 1993. Hardiness zone 6a.
