

Nyssa sylvatica RED RAGE ('Haymanred')

Высота	5-10 m
Ширина	6-8m
Крона	broad pyramidal, half-open crown
Кора и ветви	dak grey
Осенний окрас	красный
Цветы	green, flowers in May-June, inconspicuous bloom
Плоды	fruitless cultivar
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	loamy soil, sandy soil, peaty soil, acid soil, calcareous soil
Мощение	неустойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, медонос
Форма	штамбовое дерево, разветвленное дерево

RED RAGE is a small tree up to about 10 m tall. The crown is broad pyramidal and eventually grows to about 6 m wide. The slightly irregular shape of the crown gives the tree a more informal character. The twigs are greenish brown and the older bark is dark grey and grooved. RED RAGE's leaves are slightly larger than those of the species *N. sylvatica*. They are deep green and distinctly glossy. In autumn, the leaves turn intense red for several weeks. The inconspicuous flowers appear around May-June. The tree produces only male flowers and thus will not bear fruit.

Red Rage, like other *N. sylvatica*, likes a moist, preferably loamy soil. The tree is suitable as a solitary or park tree, but also does well in larger gardens. Hardiness zone 5a.
