

Staphylea pinnata

Высота	2-5 m
Ширина	2-4m
Крона	oval, later vase-shaped, half open crown
Кора и ветви	brown
Лист	green
Цветы	creamy white to greenish white, flowers in May-June, fragrant flowers
Плоды	yellow brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, calcareous soil
Мощение	неустойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	fairly
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, привлекает бабочек
Применение	кашпо для деревьев, небольшие сады
Форма	многоствольное дерево
Происхождение	Central and Southern Europe, Asia Minor

Staphylea pinnata is a large shrub to small, multi-stemmed tree up to about 5 m high. The tree grows distinctly upright and is quite narrow at a young age. Later, it widens and will develop a vase-shaped crown. The branches are uniform olive green and the leaf buds are always pointed straight up, parallel to the twigs. The odd-pinnate leaves usually consist of five leaflets, sometimes three and rarely seven. The upper side of the leaves is bright green, the underside is blue-green. Around late May and early June, the flowers open in erect panicles. The individual flowers are white with a green base and they are sometimes slightly reddened. The colour impression is greenish-white to cream. The flowers are followed by the typically inflated fruits that are characteristic of any Staphylea. In *S. pinnata*, they are 2- to 3-lobed and 3 cm long and wide. Staphylea pinnata is a strong small tree that will grow well on any nutritious, sufficiently moist but permeable soil. It is a typical warm-temperate tree that should preferably be planted in a sunny location.
