

Carpinus coreana

Высота	4 - 6 (8) m
Ширина	3-5m
Крона	flat-topped spherical to round, dark, dense crown, capricious growing
Кора и ветви	young twigs red-brown, older branches light brown to grey and smooth
Лист	ovate to elliptical, 2 - 5 cm, dark green
Цветы	monoecious, April
Плоды	in separate fruiting catkins
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	few soil requirements, preference for loamy ground, tolerates drought
Влажность почвы	устойчив к сухим почвам
Мощение	устойчив к частичному мощению
Зона зимостойкости	7b (-14,9 до -12,3 °C)
Устойчивость к ветру	moderate to good
Применение	небольшие сады
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Korea

Very variable, large shrub to small tree with graceful, overhanging branches. The crown form varies from a very flattened spherical to round. The leaves are deeply veined, dark green on top and conspicuously lighter green on the underside. No remarkable autumn colours. The flower catkins are inconspicuous, but the light green fruiting catkins consist of relatively large bracts. In general, many fruiting catkins are formed. Root growth is relatively close to the surface. Has few soil requirements but flourishes best in loamy soils. Tolerates drought. *Carpinus coreana* probably has the variety status of *C. turczaninowii*, so a change of nomenclature can be expected.
